

June 14, 2023

- Based on current forecasts, Uncontrolled Season releases from Millerton will end somewhere around mid-July. Weather and runoff rates will determine whether it ends sooner than that or later than that.
- The Success reservoir max storage this year is 75,000 acre-feet. It should reach that level in early July.
- As a reminder, these are the types of years landowners can take advantage of by recharging water and building up their groundwater accounts, especially when we are in flood operations.
- Once the Uncontrolled Season on the Friant system ends, Lower Tule will be allocating the remaining water supply out to landowners. Landowners can then use their share for either irrigation or recharge.
- For Pixley, once Uncontrolled season ends, Pixley will have to rely on being able to purchase water from other Districts to continue running. We are working on putting some deals together, but nothing definitive yet.

As always if there are any questions please call the office.

Sincerely,

Eric Limas

General Manager
